

Amendments to the Claims:

Please amend the claims to read as follows:

1-3. (Cancelled)

4. (Currently amended) The method of claim 10 wherein the step of co-incubation of the amyloid protein with heparan sulfate is in distilled water or Tris-buffered saline (pH 7.0-7.4).

5. (Cancelled)

6. (Currently amended) The method of claim 10 wherein the co-incubation is at a molar ratio of beta-amyloid protein to heparan sulfate ~~is~~-within a range of 1:0.5 to 1:100.

7. (Currently amended) The method of claim 6 wherein the molar ratio of beta-amyloid protein to heparan sulfate is about 1:5.

8. (Currently amended) The method of claim 10 wherein the co-incubation is at a weight ratio of beta-amyloid protein to heparan sulfate ~~is~~-within a range of 1:0.4 to 1:100.

9. (Currently amended) The method of claim 8 wherein the weight ratio of beta-amyloid protein to heparan sulfate is about 1:8 or 1:16.

10. (Currently amended) A method for the formation of particular amyloid plaques, the method comprising *in vitro* co-incubation of beta-amyloid protein 1-40 (SEQ ID NO: 1) for at least 3-7 days at 30-45 C with heparan sulfate, whereby spherical or compact shaped amyloid plaques are formed that demonstrate a Maltese-cross pattern when stained with Congo red and viewed under polarized light, and an amyloid star appearance when viewed by transmission electron microscopy.

11-13. (Cancelled)

14. (Original) The method of claim 10 wherein the step of co-incubation has a duration of about 7 days.

15. (Currently amended) The method of claim 10 wherein the step of co-incubation of the beta-amyloid protein with heparan sulfate occurs at about 37 C.

16-17. (Cancelled)

18. (Cancelled)
